Reference Cards
(half in color, half
BW), 20 Questions
Inspired Add-On

10 QUESTIONS!

Try to guess the size of the player's problem. You will only be able to ask 10 questions before making your best guess. Look at the question examples below for help if needed.

-How did you feel?

-Where were you?

-Who were you with?

-Does this happen to you often?

-Could you solve the problem alone?

10 QUESTIONS!

Try to guess the size of the player's problem. You will only be able to ask 10 questions before making your best guess. Look at the question examples below for help if needed.

-How did you feel?

-Where were you?

-Who were you with?

-Does this happen to you often?

-Could you solve the problem alone?

-Could you do some?

SIZE OF THE PROBLEM/REACTION KEY

Size of the Problem

0: No Problem/Glitch
This isn't really a problem, and I can solve it on my own.
Examples: not being called on when I raise my hand or breaking a pencil on accident.

1-2: Little Problem
I can usually solve this on my own. Examples: spilling something on my shirt.

Size of the Reaction

0: Hardly a Reaction
This is barely a reaction. Examples: shrugging shoulders or saying "oh well."

1-2: Little Reaction
Examples: showing frustration, crossing my arms or sighing loudly.

Big Problem/Emergency

Medium Problem

Little Problem

No Problem/Glitch

Your class is making a marshmallow cannon in science, but you can't get yours to work.

The school bully says they are going to find you at recess.

The school bully says they are going to find you after school.

You forgot to put on deodorant this morning.

You think people are talking about you behind your back but you don't know why.

It's pajama day at school but you forgot, and everyone else is wearing their pajamas.

You have a substitute today in your hardest class.

Your teacher gave a pop quiz in math.

Name _____

Directions: Think of 3 problems you had this week. They can be small problems, medium problems, or big problems. In each of the spaces provided, briefly write about the problems you thought of.

Problem #1	Problem #2	Problem #3

Next, think of what you did after the problem occurred. Did you solve it? If so, how? If not, what could you have done instead?

Problem #1 Outcome:

Problem #2 Outcome:

Size of the Reaction

5	A number 5 reaction shows big reactions, crying or throwing.
4	A number 3 or 4 showing a medium face might turn red, are sad or angry.
3	A number 3 or 4 showing a medium face might turn red, are sad or angry.
2	A number 2 or 3 showing a small face might turn red, are sad or angry.
1	A number 1 or 2 showing a small face might turn red, are sad or angry.
0	A number 0 reaction shows no reaction.

Size of the Problem

5	A number 5 problem is a BIG problem. This type of problem may be an emergency, like if someone is really hurt or if there is a fire. A BIG problem is something you can't solve without an adult.
4	A number 3 or 4 problem is a medium problem. This type of problem is too difficult to handle on our own, and we might need an adult to help us. A medium problem might be if we lost a toy, or if we felt really sick.
3	A number 3 or 4 problem is a medium problem. This type of problem is too difficult to handle on our own, and we might need an adult to help us. A medium problem might be if we lost a toy, or if we felt really sick.
2	A number 2 or 3 problem is a small problem. We can usually solve this type of problem on our own. A small problem might be if we lost a small toy, or if we felt a little sick.
1	A number 1 or 2 problem is a small problem. We can usually solve this type of problem on our own. A small problem might be if we lost a small toy, or if we felt a little sick.
0	A number 0 problem is a problem that isn't really a problem. If we raise a question but the teacher calls on someone else, it would be a number 0 problem.
